Unlock the Power of Data Analytics Lead the Future

ABOUT NIDADS

NIDADS was founded with a strong vision to empower individuals in the digital era by creating highly skilled data professionals and future-ready analysts. With a deep commitment to quality education, NIDADS delivers practical, industry-oriented learning that prepares students for real-world challenges in Data Analytics, Data Science, and emerging technologies.

At NIDADS, every learner is treated like family. We understand the value of time, effort, and hard-earned money, which is why our focus is always on practical, result-driven training. Our programs are designed to build confidence, create strong portfolios, and prepare learners for successful careers in high-growth tech roles. Over the years, NIDADS has successfully trained and guided thousands of students through both online and offline learning formats.

Our student community is diverse and inclusive, including:

- 25% Freshers (Class 12th & Graduates)
- 30% Business Owners & Working Professionals
- 30% Career Beginners & Skill Switchers
- 15% Learners from Other Career Backgrounds

This diverse learning environment encourages collaboration, idea-sharing, and real-world exposure.

NIDADS is recognized for its high-quality training standards and industry-aligned curriculum. Our programs offer hands-on projects, internships, career mentorship, and 100% placement support, along with certifications aligned with Digital India and Skill India initiatives. With high learner satisfaction and strong industry connections, NIDADS continues to be a trusted name in Data Analytics and Data Science education.

25000+ : Trusted Students

30+ : AI Tools

Mr. Gulshan Kumar

Founder

NIDADS

“Most Promising Brand” IN DATA ANALYTICS TRAINING

MISSION

At NIDADS, our mission is to empower individuals with advanced Data Analytics expertise, equipping them with the skills to analyze complex data, develop intelligent models, and drive innovation. We aim to bridge the gap between technical education and industry applications by offering expert-led training, hands-on projects, and real-world AI solutions. Through continuous learning and practical application, we prepare professionals to harness machine learning, deep learning, and data-driven decision-making, enabling them to make a significant impact in the evolving digital economy.

VISION

NIDADS envisions a future where Data Analytics and AI empower individuals to become analytical thinkers, problem solvers, and technology innovators. Our goal is to democratize AI education by delivering high-quality, practical training that aligns with industry demands. We strive to create experts who can leverage data science methodologies, automate processes, and develop AI-driven strategies to reshape industries. By fostering a culture of mentorship, research, and applied learning, we ensure that every learner gains financial independence, career growth, and the ability to pioneer AI-driven advancements. Our vision is to be a global leader in Machine Learning and AI education, shaping the next generation of professionals ready to transform the digital landscape.

AWARDS

Indian Iconic Award By
India's 1st Women IPS Officer Kiran Bedi

Bharat Business Award By Ashneer Grover For India's Most Recommended Skill Based Institute

COURSE CERTIFICATIONS

WHO IS THIS PROGRAM FOR?

Professionals

DizitalAdda is India's most recommended skill based institute, offering expert training in data analytics and artificial intelligence.

Business Owner

DizitalAdda provides data analytics skills to help business owners grow their brands online, enhance visibility, and boost sales.

Students

A perfect opportunity for students to gain industry-relevant skills, making them job-ready and future-proofing their careers.

Career Switchers

Transition into a rewarding data analytics career with practical knowledge, hands-on training, and expert mentorship at DizitalAdda.

Freelancers

Unlock new income opportunities by mastering data analytics skills to attract clients, grow your personal brand, and work independently.

Start-Ups

Empower your startup with data analytics expertise to scale your business, enhance online presence, and generate more leads effectively.

COURSES

WE TRAIN

Course 1 : Diploma In Data Analytics And AI

Duration : 12 Months

Structure :

- Foundations of Data Analytics, Statistics, Python Programming, and Data Visualization using tools like Excel, Power BI, and Tableau.
- Machine Learning, AI Applications, Deep Learning Basics, Real-Time Projects, and Industry Use Cases with tools like TensorFlow and SQL.

Course 2 : Advanced Certification In Data Analytics And AI

Duration : 6 Months

Structure :

- Advanced Excel, SQL, Python for Data Analysis, Data Cleaning & Visualization with Tableau and Power BI.
- Machine Learning Models, AI Applications, Predictive Analytics, and Capstone Projects with real-world datasets.

Course 2 : Certification In Data Analytics And AI

Duration : 3 Months

Structure :

- Basics of Data Analytics, Excel, and Python Fundamentals for Data Handling and Preprocessing.
- Data Visualization with Power BI/Tableau, Introduction to Machine Learning, and Mini Projects on Real-world Data.

DDAL&AI – DIPLOMA IN DATA ANALYTICS AND AI

12 MONTHS COURSE

MONTH 1: DATA FUNDAMENTALS

Week 1: Introduction to Data & Excel Fundamentals

What is data? Types of data in business
Introduction to data analytics career paths
Excel interface and navigation
Basic cell operations and formatting
Understanding rows, columns, and worksheets

Hands-on Implementation

Excel setup and customization
Creating your first dataset
Basic data entry and formatting
Practice Project: "Personal Budget Tracker"
Soft Skills Focus: Professional communication basics

Week 2: Excel Formulas & Basic Functions

Mathematical functions: SUM, AVERAGE, COUNT, MIN, MAX
Logical functions: IF, AND, OR
Text functions: CONCATENATE, LEFT, RIGHT, UPPER, LOWER
Date functions: TODAY, NOW, DATEDIF
Error handling basics

Hands-on Implementation

Building a grade calculator
Creating employee timesheet
Assignment: Create personal expense tracker with formulas

Week 3: Data Organization & Basic Analysis

Data validation and input controls

Sorting and filtering data

Basic conditional formatting

Introduction to charts and graphs

Data cleaning basics

Hands-on Implementation

Creating dropdown lists and validation rules

Sorting multi-column data

Mini Project: "Sales Data Organization Dashboard"

Introduction to chart types and when to use them

Week 4: Advanced Excel Functions & Pivot Tables

VLOOKUP and HLOOKUP functions

COUNTIF, SUMIF, AVERAGEIF functions

Introduction to Pivot Tables

Basic Pivot Charts

Data summarization techniques

Hands-on Implementation

Building lookup systems

Creating first Pivot Table

Major Project: "Retail Store Performance Analysis"

Month 1 Assessment: Excel skills test + project presentation

MONTH 2: ADVANCED EXCEL & INTRODUCTION TO BUSINESS INTELLIGENCE

Week 5: Excel Power Features

Advanced Pivot Table features (slicers, timelines)
Introduction to Power Query
What-If Analysis and Scenario Planning
Goal Seek and Solver basics
Creating professional dashboards in Excel

Hands-on Implementation

Dynamic dashboard creation
Data import from multiple sources
Practice Project: "Monthly Sales Dashboard"
Soft Skills Focus: Data storytelling basics

Week 6: Introduction to Power BI

What is Business Intelligence?
Power BI ecosystem overview
Power BI Desktop installation and setup
Connecting to data sources
Basic visualization creation

Hands-on Implementation

Power BI Desktop navigation
Importing Excel data into Power BI
Creating first visualizations
Practice Project: "Personal Finance Dashboard in Power BI"

Week 7: Power BI Data Modeling Basics

Understanding data models

Creating relationships between tables

Introduction to calculated columns

Basic measures and KPIs

Dashboard vs Report understanding

Hands-on Implementation

Building multi-table data models

Creating relationships

Mini Project: "School Management Dashboard"

Understanding when to use different visualizations

Week 8: Power BI Visualization & Sharing

Advanced visualization types

Formatting and design principles

Interactive features (filters, slicers)

Publishing to Power BI Service

Sharing dashboards and reports

Hands-on Implementation

Creating interactive dashboards

Applying consistent formatting

Major Project: "Company Performance Dashboard"

Month 2 Assessment: Power BI dashboard creation + presentation

MONTH 3: DATABASE FUNDAMENTALS & SQL

Week 9: Introduction to Databases

What are databases? Why use them?

Database vs Spreadsheet comparison

Introduction to SQL (Structured Query Language)

Database management systems overview

Setting up your first database

Hands-on Implementation

Installing MySQL/PostgreSQL

Understanding database structure

Creating your first database and table

Practice Project: "Personal Library Database"

Week 10: Basic SQL Queries

SELECT statements and basic syntax

WHERE clause and filtering data

Sorting with ORDER BY

Basic aggregate functions (COUNT, SUM, AVG)

DISTINCT and NULL handling

Hands-on Implementation

Writing basic SELECT queries

Filtering and sorting data

Practice Project: "Customer Database Queries"

SQL syntax practice exercises

Week 11: Intermediate SQL Operations

GROUP BY and HAVING clauses

Introduction to JOINS (INNER, LEFT, RIGHT)

Basic subqueries

INSERT, UPDATE, DELETE operations

Data type conversions

Hands-on Implementation

Grouping and aggregating data

Joining multiple tables

Mini Project: "E-commerce Order Analysis"

Data manipulation exercises

Week 12: SQL for Data Analysis

CASE statements for conditional logic

String functions and date manipulation

Window functions introduction (ROW_NUMBER, RANK)

Creating views and temporary tables

SQL best practices

Hands-on Implementation

Advanced analytical queries

Creating reusable views

Major Project: "Customer Behavior Analysis with SQL"

Month 3 Assessment: SQL proficiency test + analysis project

MONTH 4: INTRODUCTION TO PROGRAMMING & PYTHON

Week 13: Programming Fundamentals

Why learn programming for data analysis?
Python installation and setup (Anaconda)
Python syntax and basic concepts
Variables, data types, and operators
Introduction to Jupyter Notebooks

Hands-on Implementation

Setting up Python environment
Writing first Python programs
Practice Project: "Simple Calculator in Python"
Soft Skills Focus: Problem-solving methodologies

Week 14: Python Data Structures & Control Flow

Lists, tuples, dictionaries, and sets
Conditional statements (if, elif, else)
Loops (for, while)
Functions and basic modules
File reading and writing

Hands-on Implementation

Working with different data structures
Creating custom functions
Practice Project: "Student Management System"
Data processing exercises

Week 15: Introduction to Pandas

What is Pandas and why use it?

Series and DataFrame concepts

Loading data from CSV, Excel files

Basic data inspection and info methods

Simple data filtering and selection

Hands-on Implementation

Creating and manipulating DataFrames

Loading real datasets

Mini Project: "Movie Dataset Exploration"

Basic data cleaning exercises

Week 16: Basic Data Analysis with Python

Data summarization with describe

Grouping and aggregation basics

Handling missing data

Basic data visualization with Matplotlib

Creating simple charts and plots

Hands-on Implementation

Summarizing and exploring datasets

Creating basic visualizations

Major Project: "City Weather Data Analysis"

Month 4 Assessment: Python programming test + analysis project

MONTH 5: DATA VISUALIZATION & STORYTELLING

Week 17: Advanced Excel Visualization

- Chart types and when to use them
- Advanced charting techniques
- Creating dashboard layouts
- Interactive charts with form controls
- Sparklines and data bars

Hands-on Implementation

- Building comprehensive Excel dashboards
- Chart customization and formatting
- Practice Project: "Regional Sales Performance Dashboard"

Week 18: Data Visualization Principles

- Principles of effective data visualization
- Color theory and accessibility
- Choosing the right chart type
- Common visualization mistakes to avoid
- Storytelling with data concepts

Hands-on Implementation

- Redesigning poor visualizations
- Creating story-driven presentations
- Mini Project: "Before and After Visualization Makeover"

Week 19: Python Visualization Libraries

Matplotlib fundamentals
Seaborn for statistical plots
Plotly for interactive charts
Customizing plots and styling
Saving and exporting visualizations

Hands-on Implementation

Creating various plot types
Building interactive dashboards
Practice Project: "Data Visualization Dashboard"

Week 20: Advanced Power BI Techniques

DAX basics (calculated columns vs measures)
Time intelligence functions
Advanced visualization customization
Bookmarks and navigation
Performance optimization tips

Hands-on Implementation

Creating complex DAX formulas
Building navigation systems
Major Project: "Executive Business Intelligence Dashboard"
Month 5 Assessment: Visualization portfolio review

MONTH 6: STATISTICS & DATA ANALYSIS

Week 21: Neural Network Fundamentals

Measures of central tendency (mean, median, mode)

Measures of variability (range, variance, standard deviation)

Data distributions and histograms

Percentiles and quartiles

Statistical thinking for business

Hands-on Implementation

Calculating statistics in Excel and Python

Creating distribution analyses

Practice Project: "Employee Salary Analysis"

Week 22: Dexploratory Data Analysis (EDA)

EDA methodology and process

Identifying patterns and trends

Correlation analysis

Outlier detection and treatment

Data quality assessment

Hands-on Implementation

Comprehensive EDA process

Pattern recognition exercises

Mini Project: "Customer Demographics Analysis"

Week 23: Introduction to Inferential Statistics

Sampling and population concepts
Confidence intervals basics
Introduction to hypothesis testing
t-tests and their applications
p-values and statistical significance

Hands-on Implementation

Conducting basic statistical tests
Interpreting statistical results
Practice Project: "A/B Testing Analysis for Marketing"

Week 24: Business Statistics Applications

Quality control and process improvement
Customer segmentation basics
Forecasting fundamentals
Risk analysis introduction
Statistical reporting for management

Hands-on Implementation

Business-focused statistical analysis
Creating statistical reports
Major Project: "Business Performance Statistical Analysis"
Month 6 Assessment: Statistical analysis project + interpretation

MONTH 7: ADVANCED DATA ANALYSIS TECHNIQUES

Week 25: Advanced Pandas Operations

- Multi-indexing and hierarchical data
- Advanced grouping and pivoting
- Time series data handling
- Merging and joining datasets
- Performance optimization techniques

Hands-on Implementation

- Complex data transformation tasks
- Time series analysis basics
- Practice Project: "Multi-source Data Integration"

Week 26: Data Cleaning & Preprocessing

- Data quality assessment framework
- Advanced missing data handling
- Duplicate detection and removal
- Data type optimization
- Creating data validation rules

Hands-on Implementation

- End-to-end data cleaning pipeline
- Automation of cleaning processes
- Mini Project: "Messy Dataset Cleanup Challenge"

Week 27: Introduction to Machine Learning Concepts

What is machine learning? Types of ML

Supervised vs unsupervised learning

Common ML applications in business

Introduction to scikit-learn

Model evaluation basics

Hands-on Implementation

Exploring ML datasets

Understanding different problem types

Practice Project: "ML Concept Exploration"

Week 28: Basic Predictive Modeling

Linear regression concepts and implementation

Logistic regression for classification

Model training and testing

Basic model evaluation metrics

Interpreting model results

Hands-on Implementation

Building simple prediction models

Model evaluation and interpretation

Major Project: "Sales Prediction Model"

Month 7 Assessment: Data analysis techniques demonstration

MONTH 8: AUTOMATION & EFFICIENCY

Week 29: Excel Automation with Macros

- Introduction to VBA and Macros
- Recording and editing macros
- Creating user-friendly interfaces
- Automating report generation
- Error handling in macros

Hands-on Implementation

- Creating automated reporting systems
- Building interactive Excel applications
- Practice Project: "Automated Monthly Report Generator"

Week 30: Power Query & Data Transformation

- Advanced Power Query operations
- M language basics
- Combining data from multiple sources
- Creating reusable data transformation steps
- Scheduled data refresh setup

Hands-on Implementation

- Building complex data transformation workflows
- Automating data updates
- Mini Project: "Multi-source Data Integration Pipeline"

Week 31: Python Automation for Data Tasks

File system operations with Python

Automating Excel operations with openpyxl

Email automation for reports

Task scheduling basics

Creating data processing scripts

Hands-on Implementation

Building automated data processing workflows

Creating scheduled reporting systems

Practice Project: "Automated Data Processing Pipeline"

Week 32: Dashboard Automation & Performance

Power BI service automation

Performance optimization techniques

Creating parameterized reports

Setting up automatic data refresh

Mobile dashboard optimization

Hands-on Implementation

Optimizing dashboard performance

Setting up automated systems

Major Project: "Enterprise-Level Automated Dashboard"

Month 8 Assessment: Automation project showcase

MONTH 9: INDUSTRY APPLICATIONS & CASE STUDIES

Week 33: Retail & E-commerce Analytics

Customer analytics and segmentation
Sales performance analysis
Inventory management insights
Market basket analysis basics
Customer lifetime value concepts

Hands-on Implementation

Customer analytics and segmentation
Sales performance analysis
Inventory management insights
Market basket analysis basics
Customer lifetime value concepts

Week 34: Financial Data Analysis

Financial KPIs and metrics
Budget vs actual analysis
Trend analysis and forecasting
Risk assessment basics
Financial reporting automation

Hands-on Implementation

Financial performance analysis
Automated financial reporting
Mini Project: "Company Financial Health Dashboard"

Week 35: Marketing Analytics

Campaign performance analysis
Attribution modeling basics
Customer acquisition cost analysis
ROI and ROAS calculations
Social media analytics introduction

Hands-on Implementation

Marketing campaign analysis
ROI calculations and reporting
Practice Project: "Marketing Campaign Effectiveness Analysis"

Week 36: HR & People Analytics

Employee performance metrics
Attrition analysis and prediction
Recruitment analytics
Training effectiveness measurement
Diversity and inclusion metrics

Hands-on Implementation

HR metrics dashboard creation
Employee analysis projects
Major Project: "Comprehensive HR Analytics Dashboard"

MONTH 10: ADVANCED MACHINE LEARNING APPLICATIONS

Week 37: Classification Problems

- Decision trees and random forests
- Model evaluation for classification
- Feature importance and selection
- Handling imbalanced datasets
- Business applications of classification

Hands-on Implementation

- Customer churn prediction
- Credit risk assessment basics
- Practice Project: "Customer Segmentation with ML"

Week 38: Regression & Forecasting

- Multiple linear regression
- Polynomial regression
- Time series forecasting basics
- Seasonal decomposition
- Forecast accuracy measurement

Hands-on Implementation

- Sales forecasting models
- Price prediction systems
- Mini Project: "Demand Forecasting System"

Week 39: Clustering & Unsupervised Learning

K-means clustering

Hierarchical clustering

Principal component analysis (PCA) basics

Market segmentation applications

Recommendation systems introduction

Hands-on Implementation

Customer segmentation projects

Market analysis with clustering

Practice Project: "Customer Behavior Clustering Analysis"

Week 40: Model Deployment Basics

Model saving and loading

Creating simple web interfaces

Integrating models with Excel/Power BI

Model monitoring basics

Documentation and handover

Hands-on Implementation

Deploying models for business use

Creating user-friendly interfaces

Major Project: "End-to-End ML Solution for Business"

MONTH 11: SPECIALIZATION & ADVANCED PROJECTS

Week 41: Choose Your Specialization Track

Advanced Power BI
Enterprise dashboard design
Data governance principles
BI strategy and implementation

Track A: Business Intelligence Specialist

Advanced Power BI
Enterprise dashboard design
Data governance principles
BI strategy and implementation

Track B: Data Analysis & Reporting Expert

Advanced Excel and automation
Statistical analysis mastery
Report automation and optimization
Stakeholder communication

Track C: Beginner Data Scientist

Advanced Python for data science
More machine learning algorithms
Feature engineering techniques
Model evaluation and selection

Week 42: Specialization Project Development

Activities

Deep dive into chosen specialization
Industry mentor guidance
Advanced project development
Portfolio enhancement

MONTH 12: CAPSTONE PROJECT & CAREER PREPARATION

Week 43: Capstone Project Planning

Activities

Project scope definition and planning
Data source identification and acquisition
Technical architecture design
Timeline and milestone creation

Week 44: Project Finalization & Presentation

Activities

Final testing and optimization
Presentation preparation
Peer review and feedback
Portfolio integration

Week 45: Career Launch & Placement Preparation

Activities

Resume and LinkedIn optimization
Interview preparation and mock sessions
Salary negotiation guidance
Alumni network introduction

ADA&AI – ADVANCED CERTIFICATION IN DATA ANALYTICS AND AI

6 MONTHS COURSE

MONTH 1: FOUNDATION OF DATA ANALYTICS

Week 1: Data Analytics Fundamentals

What is Data Analytics? Types and Applications
Data Analyst vs Data Scientist vs Business Analyst
Data Analytics Life Cycle
Types of Data: Structured vs Unstructured
Introduction to Business Intelligence

Hands-on Implementation

Excel Interface Deep Dive
Cell References: Absolute vs Relative
Basic Functions: SUM, AVERAGE, COUNT, MIN, MAX
Hands-on: Sales Data Analysis

Week 2: Excel Formulas & Functions

Logical Functions: IF, AND, OR, NOT
Text Functions: CONCATENATE, LEFT, RIGHT, MID
Date & Time Functions
Error Handling: IFERROR, ISERROR

Hands-on Implementation

Advanced IF statements and nested conditions

COUNTIF, SUMIF, AVERAGEIF functions

Data validation and dropdown lists

Practice Dataset: Employee Performance Analysis

Week 3: Data Management in Excel

Sorting and Filtering Techniques

Conditional Formatting Rules

Data Tables and What-If Analysis

Pivot Table Fundamentals

Hands-on Implementation

Creating Dynamic Pivot Tables

Pivot Charts and Slicers

Data Consolidation Techniques

Mini Project: "Monthly Sales Performance Dashboard"

Week 4: Advanced Excel & Power Query

VLOOKUP, HLOOKUP, XLOOKUP

INDEX-MATCH combinations

Array Formulas

Introduction to Power Query

Hands-on Implementation

Complex Lookup Functions

Data Transformation with Power Query

Combining Multiple Data Sources

Major Project: "Retail Chain Performance Analysis"

MONTH 2: POWER BI & DATA VISUALIZATION

Week 5: Power BI Fundamentals

- Power BI Ecosystem Overview
- Power BI Desktop Architecture
- Data Sources and Connections
- Data Model Concepts

Hands-on Implementation

- Power BI Desktop Navigation
- Importing Data from Multiple Sources
- Power Query in Power BI
- Basic Visualizations: Charts, Tables, Cards

Week 6: Data Modeling & Relationships

- Star Schema vs Snowflake Schema
- Relationships: One-to-One, One-to-Many
- Data Modeling Best Practices
- Introduction to DAX

Hands-on Implementation

- Creating Data Relationships
- Calculated Columns vs Measures
- Basic DAX Functions
- Building Interactive Dashboards

Week 7: Advanced Power BI & DAX

- DAX Functions: SUM, AVERAGE, COUNT
- Time Intelligence: YTD, MTD, QTD
- Filter Context and Row Context
- DAX Best Practices

Hands-on Implementation

Complex DAX Calculations

Time-based Analysis

Advanced Visualizations: Treemap, Waterfall, Funnel

Mini Project: "HR Analytics Dashboard"

Week 8: Data Storytelling & Advanced Visualizations

Data Storytelling Principles

Choosing Right Visualizations

Color Theory and Design Principles

Dashboard Best Practices

Hands-on Implementation

Custom Visuals and Formatting

Interactive Features: Slicers, Bookmarks, Drill-through

Mobile-friendly Dashboard Design

Major Project: "Executive Sales Performance Dashboard"

MONTH 3: SQL FOR DATA ANALYSIS

Week 9: SQL Fundamentals

Introduction to Databases and RDBMS

SQL Syntax and Structure

Database Design Principles

Data Types and Constraints

Hands-on Implementation

Setting up MySQL/PostgreSQL

SELECT statements and filtering

WHERE clause and operators

Sorting with ORDER BY

Practice: E-commerce Database Queries

Week 10: Intermediate SQL Operations

Aggregate Functions: COUNT, SUM, AVG, MIN, MAX

GROUP BY and HAVING clauses

SQL Joins: INNER, LEFT, RIGHT, FULL OUTER

Union and Union All

Hands-on Implementation

Complex Aggregations and Grouping

Multi-table Joins

Data Cleaning with SQL

Mini Project: "Customer Order Analysis"

Week 11: Advanced SQL Techniques

Subqueries and Nested Queries

Common Table Expressions (CTEs)

Window Functions: ROW_NUMBER, RANK, DENSE_RANK

CASE Statements

Hands-on Implementation

Complex Subqueries

Window Functions for Analytics

Data Type Conversions

String and Date Manipulations

Major Project: "Banking Transaction Analysis"

Week 12: SQL Optimization & Real-world Applications

Query Optimization Techniques

Indexing Strategies

Performance Tuning

SQL in Business Intelligence

Hands-on Implementation

Performance Analysis and Optimization

Creating Views and Stored Procedures

Integration with Power BI

Capstone SQL Project: "Multi-dimensional Business Analysis"

MONTH 4: PYTHON FOR DATA ANALYSIS

Week 13: Python Programming Fundamentals

Python Installation and Setup

Python Syntax and Data Types

Variables, Operators, and Control Structures

Functions and Modules

Hands-on Implementation

Jupyter Notebook Setup

Basic Python Programming

Lists, Dictionaries, Tuples, Sets

File I/O Operations

Practice: Data Processing Scripts

Week 14: NumPy & Pandas Foundations

Introduction to NumPy Arrays

Array Operations and Broadcasting

Pandas DataFrame Structure

Data Loading and Saving

Hands-on Implementation

NumPy Array Manipulations

DataFrame Creation and Indexing

Data Selection and Filtering

Basic Data Cleaning

Mini Project: "Student Grade Analysis"

Week 15: Advanced Pandas Operations

GroupBy Operations

Pivot Tables and Cross-tabulations

Merging and Joining DataFrames

Data Aggregation Techniques

Hands-on Implementation

Complex Data Manipulations

Multi-level Indexing

Data Transformation Techniques

Major Project: "E-commerce Customer Segmentation"

Week 16: Data Visualization with Python

Matplotlib Fundamentals

Seaborn for Statistical Plots

Plotly for Interactive Visualizations

Visualization Best Practices

Hands-on Implementation

Creating Various Plot Types

Customizing Visualizations

Interactive Dashboard Creation

Portfolio Project: "COVID-19 Data Analysis Dashboard"

MONTH 5: STATISTICS & ADVANCED ANALYTICS

Week 17: Exploratory Data Analysis (EDA)

EDA Methodology and Workflow

Descriptive Statistics: Central Tendency, Variability

Data Distributions and Histograms

Correlation and Causation

Hands-on Implementation

Comprehensive EDA Process

Outlier Detection and Treatment

Missing Value Analysis

Mini Project: "Housing Market Analysis"

Week 18: Statistical Analysis & Hypothesis Testing

Inferential Statistics Fundamentals

Hypothesis Testing Framework

T-tests, Chi-square Tests

P-values and Statistical Significance

Hands-on Implementation

Creating Various Plot Types

Customizing Visualizations

Interactive Dashboard Creation

Portfolio Project: "COVID-19 Data Analysis Dashboard"

Week 19: Data Preprocessing & Feature Engineering

Data Quality Assessment
Missing Data Handling Strategies
Outlier Treatment Methods
Feature Scaling and Normalization

Hands-on Implementation

Advanced Data Cleaning Techniques
Feature Creation and Selection
Data Transformation Pipeline
Capstone Project Prep: "Comprehensive Data Preprocessing"

Week 20: Machine Learning Basics & Predictive Analytics

Introduction to Machine Learning
Supervised vs Unsupervised Learning
Regression and Classification Basics
Model Evaluation Metrics

Hands-on Implementation

Creating Various Plot Types
Customizing Visualizations
Interactive Dashboard Creation
Portfolio Project: "COVID-19 Data Analysis Dashboard"

MONTH 6: CAPSTONE PROJECTS & CAREER PREPARATION

Week 21: Industry Case Studies & Domain Expertise

Healthcare Analytics Use Cases

Financial Services Analytics

Retail & E-commerce Analytics

HR & People Analytics

Hands-on Implementation

Domain-specific KPI Analysis

Industry-standard Reporting

Choose 1 Domain Project:

Healthcare: "Patient Outcome Analysis"

Finance: "Credit Risk Assessment"

Retail: "Customer Lifetime Value Analysis"

Week 22: End-to-End Capstone Project - Week 1

1. Comprehensive Business Intelligence Solution

Data Collection (Web Scraping/APIs)

Data Cleaning and Preprocessing (Python)

Database Design and Implementation (SQL)

Interactive Dashboard Creation (Power BI)

Statistical Analysis and Insights

2. Multi-platform Analytics Pipeline

Excel-based Data Processing

SQL Database Management

Python Analytics Engine

Power BI Visualization Layer

Week 23: End-to-End Capstone Project – Week 2

1. Comprehensive Business Intelligence Solution

Advanced Analytics Implementation
Dashboard Optimization
Documentation and Code Review
Performance Testing
Presentation Preparation

Week 24: Portfolio Finalization & Placement Preparation

Career Readiness

GitHub Portfolio Setup
LinkedIn Profile Optimization
Resume Finalization
Mock Technical Interviews
HR Interview Preparation
Capstone Project Presentation

Final Assessments

Capstone Project Viva
Technical Interview Simulation
Portfolio Review
Peer Project Evaluation

CDA&AI – CERTIFICATION IN DATA ANALYTICS AND AI

3 MONTHS COURSE

MONTH 1: DATA & EXCEL FOUNDATIONS

Week 1: Data Analytics Fundamentals

Introduction to Data Analytics landscape
Role and responsibilities of a Data Analyst
Types of data: Structured vs Unstructured
Data Analytics lifecycle and methodologies
Excel interface mastery and best practices

Hands-on Implementation

Excel navigation and advanced formatting
Data types and validation techniques
Building dynamic reports with named ranges

Week 2: Advanced Excel Functions & Logic

Logical functions deep dive: IF, IFS, AND, OR
Conditional calculations: COUNTIF, SUMIFS, AVERAGEIFS
Error handling: IFERROR, ISERROR
Text manipulation functions

Hands-on Implementation

Complex nested IF statements
Multi-criteria analysis with SUMIFS/COUNTIFS
Data cleaning with text functions

Week 3: Lookup Functions & Data Relationships

VLOOKUP vs XLOOKUP comparison
INDEX-MATCH combination techniques
Handling errors in lookup functions
Creating dynamic lookup systems

Hands-on Implementation

Building employee database with lookups
Product inventory management system
Cross-referencing multiple data sources

Week 4: Pivot Tables & Power Query Introduction

Pivot table architecture and design principles
Grouping, filtering, and calculated fields
Introduction to Power Query ETL process
Data transformation concepts

Hands-on Implementation

Multi-dimensional pivot analysis
Dynamic pivot charts and slicers
Basic Power Query transformations
Data cleaning and preparation workflows

MONTH 2: BUSINESS INTELLIGENCE & ANALYTICS

Week 5: Power BI Fundamentals & Data Modeling

Business Intelligence concepts and importance
Power BI ecosystem: Desktop, Service, Mobile
Data modeling principles and relationships
Star schema vs snowflake schema design

Hands-on Implementation

Power BI Desktop installation and setup
Connecting to multiple data sources
Creating basic visualizations and reports

Week 6: Advanced Power BI & DAX

DAX (Data Analysis Expressions) fundamentals
Calculated columns vs measures
Time intelligence functions
Advanced DAX patterns and best practices

Hands-on Implementation

Creating complex calculated measures
Time-based analysis with DAX
Advanced visualizations: custom charts, maps

Week 7: SQL & Database Fundamentals

Relational database concepts
SQL syntax and query structure
Database normalization principles
Primary keys, foreign keys, and constraints

Hands-on Implementation

Setting up MySQL environment
Creating Schema & Tables in Database
Basic SELECT statements and filtering
Sorting and limiting results

Week 8: Advanced SQL & Data Manipulation

JOIN operations: INNER, LEFT, RIGHT, FULL
Subqueries and correlated queries
Window functions and analytical operations

Hands-on Implementation

Complex multi-table joins
Aggregate functions with GROUP BY
Window functions for ranking and analysis

MONTH 3: PYTHON ANALYTICS & CAREER PREPARATION

Week 9: Python Fundamentals & Pandas

Python syntax and programming concepts
Data structures: lists, dictionaries, tuples
NumPy arrays and mathematical operations
Pandas library architecture and functionality

Hands-on Implementation

Python environment setup (Anaconda/Jupyter)
Data loading and exploration with Pandas
Data cleaning and preprocessing techniques
Hands-on: Netflix dataset analysis

Week 10: Advanced Python & Statistical Analysis

Exploratory Data Analysis (EDA) methodology

Correlation analysis and hypothesis testing

Statistical significance and p-values

Hands-on Implementation

Advanced Pandas operations: groupby, pivot, merge

Statistical analysis with SciPy

Data visualization with Matplotlib and Seaborn

Week 11: Data Visualization & Storytelling

Data storytelling principles

Chart selection for different data types

Interactive visualization techniques

Hands-on Implementation

Advanced Matplotlib and Seaborn techniques

Interactive visualizations with Plotly

Creating compelling data narratives

Week 12: Capstone Project & Career Preparation

Option 1: E-commerce Analytics Suite

Customer behavior analysis using Python

Sales forecasting with statistical models

Interactive Power BI dashboard

SQL database optimization

Option 2: Healthcare Data Analytics

Patient outcome prediction modeling
Hospital efficiency dashboard
Statistical analysis of treatment effectiveness
Data privacy and ethical considerations

Option 3: Financial Risk Assessment

Loan default prediction using Python
Portfolio performance analysis
Risk visualization dashboard
Regulatory compliance reporting

Career Preparation

ATS friendly Resume Building: Analytics-specific templates and optimization
LinkedIn Optimization: Professional profile enhancement
Interview Preparation: Technical and behavioral interview practice

Final Capstone Deliverables

Complete Jupyter Notebook: Data cleaning, EDA, and insights
Power BI Dashboard: Interactive business intelligence report
SQL Database: Optimized queries and stored procedures
GitHub Repository: Well-documented code and project files
Project Report: Executive summary and technical documentation
Presentation: 10-minute demo with Q&A session

PLACEMENT SUPPORT FEATURES

Career Guidance

When I joined NIDADS, I had zero experience with coding or Data Analytics. But the way they teach — step-by-step with real examples — made everything click. I actually built my first Data Analytics model last month. So proud of this journey!

The course content is very updated and practical. I learned a lot. Only suggestion some videos could be better in quality. Other than that, everything was top-notch.

I don't come from a tech background, but still, I never felt left out. The mentors explained everything patiently, and the live doubt-clearing sessions helped a lot. Best learning experience ever!

At first, I thought the course fee was a bit much, but after completing it, I can say it was worth every rupee. The certification added a lot of value to my CV and confidence.
